City of Riverside digs down deep in ongoing efforts to improve aging infrastructure

New sewer main line to be installed at Van Buren Boulevard and Arlington Avenue

Riverside, Calif. – On Friday, October 9 at 9:00 p.m., the City of Riverside will begin work to replace an old and undersized section of sewer main line which serves as a direct feed to the water quality control plant.

This work is part of an ongoing effort to widen Van Buren Boulevard and modernize the city's sewer system. The work will continue for approximately four or five days, 24 hours per day until completed. Work is expected to be completed by the morning of Wednesday, October 14.

The work will require a lane closure to one of the two southbound left turn lanes on Van Buren Boulevard at Arlington Avenue.

All other lanes will remain open; however, the City anticipates there will be traffic congestion and recommends drivers find alternate routes where possible during this short period of time.
